Report for Central Hospital

Introduction

This document aims to analyze the linelist data to provide insights into the outbreak dynamics. The analysis includes age distribution, epidemic curve, gender distribution, symptoms analysis, geographic distribution, case fatality rate by age group, time from infection to hospitalization, and hospital stay duration.

Summary Statistics

64.49% of cases were **younger** than 18 years (287 out of 445).

Age Distribution of Cases
